M. Serrano OF	No change, 10% above his normal

18 others not listed today. 2 flagged: J. Ortega (RP), C. Duvall (RP).

Jump over two weeks

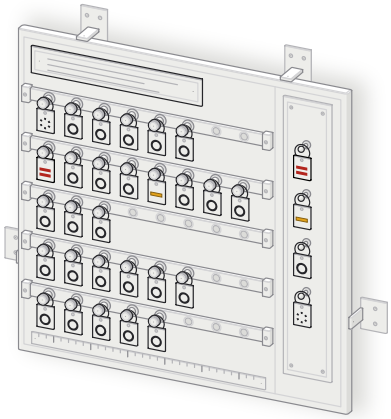

J. Ortega RP

C. Duvall RP

Availability board

One peg per player. Two bars = Check in. One bar = Watch. Ring = No change. Dashed ring = Not enough data.

How a flag works: a player is flagged only when his drop is big compared with his own last 28 days and bigger than normal test-to-test noise. Team and league notes are context only. Coaches and medical staff decide who plays.

Jump = reactive strength from the force-plate jump (RSI-mod). **Sources:** VALD ForceDecks, Catapult (load, throws, pitches), morning wellness form. Fictional roster and data. For context only: a typical jump score at this level is about 0.52 m/s (illustrative, not a published MLB or MiLB norm).
